

Design Technology - Vision Statement

With tomorrow's forever changing world, our pupils are ready to participate and apply their design and technology skills. Children learn to think and thrive creatively to improve quality of life. They are encouraged to become independent and motivated problem solvers, as individuals and members of a team. They combine practical skills with an understanding of visual, social and environmental issues, function and business practices. As they do so, they are inspired and coached how to reflect on and evaluate present and past design and technology, its uses and effects. Through design and technology, Homer believe that all our pupils can become discerning and knowledgeable users of products and become pioneers. We will, where possible, add D&T as a layer which compliments, enhances and brings the curriculum to life!
